Doctor Bryan Ardis Verifiable Messages-

1. The only FDA approved drug for 'covid' symptoms is Remdesivir which is known to be highly toxic resulting in multi-organ failure including kidneys, liver & lungs.
2. Toxic peptides same as or similar to natural or mass produced synthetic venom have been discovered and clinically studied in 'covid' patients and certified in peer reviewed documents.
3. Various agencies are testing hundreds of water treatment systems for the same peptide toxins to predict when those regions will have a 'covid' outbreak.
4. 'Covid' symptoms (including fever, aches, nausea, fatigue, blurred vision, brain fog, ageusia, anosmia, clotting issues, kidney failure and edema) are same as neurotoxic venom symptoms.
5. Doctors may confirm presence of natural or synthetic venom peptide toxins with Enzyme-Linked Immuno-Assay (ELISA) testing for their patients with those symptoms.
6. Those patients are successfully healed with common venom antidotes including Bentonite, Budesonide, vitamin C, Corticosteroids, Copper, vitamin D, Hydroxychloroquine, Ivermectin, Monoclonal Antibodies, Nicotine, Quercetin, and Zinc.
